

Pre-Plumbed Packages

Now you can take the hassle and added cost out of water heating system installations. A Hamilton Engineering pre-plumbed package comes complete with all the piping (and stands where applicable) you need for system assembly. Pre-plumbing avoids the problems and delays associated with custom-fitted plumbing, and assures you of the highest quality all-copper installation. The unions and flanges are color-coded and a typical installation takes less than one hour. You'll get it right the first time with a Hamilton Engineering pre-plumbed package.. and you'll save time and money, too.

Hamilton Engineering

Pre-Plumbed Packages

Hamilton Engineering's Pre-Plumbed Packages eliminate installation headaches and delays, and are:

- Custom engineered for your specific application
- Made of high quality copper, brass and stainless steel components
- Easy to assemble with color-coded connections and photos of the actual manifold for reference
- Plumbing multiple water heater systems is complicated. Only Hamilton can guarantee it's done right!

EVO Family Of Products - Rack Pack

- Common venting and single point utility connections make installation simple
- Cascade Controls enable all units to operate as a single, integrated system while maintaining full safety

All Copper Finned Families - SIDE TO SIDE

- Compact arrangement for minimum floor space and maximum access
- Fits well in square spaces

END TO END

- Fits narrow spaces such as corridors, while preserving good service access

STACK PACK

- Designed for two or more heaters and one or more storage tanks
- Provides redundancy and up to two times the BTU output in the same area as one heater or boiler

MINI STACK II

- Designed for one water heater or boiler
- Uses the same space as Tank Type heaters, but has better efficiency and triple the service life

REVERSE MINI STACK

- Fits low ceiling heights while maintaining tank in a vertical position
